Takklemaggot

Enchantment — Aura

Enchant creature

At the beginning of the upkeep of enchanted creature's controller, put a -0/-1 counter on that creature.

When enchanted creature is put into a graveyard, that creature's controller chooses a creature that Takklemaggot could enchant. If he or she does, return Takklemaggot to the battlefield under your control attached to that creature. If he or she doesn't, return Takklemaggot to the battlefield under your control as a non-Aura enchantment. It loses "enchant creature" and gains "At the beginning of that player's upkeep, Takklemaggot deals 1 damage to him or her."
